

SHAHZAMAN

Faisalabad, Pakistan (Open to Remote) | sheikhshahzaman001@gmail.com | shahzaman.dev | linkedin.com/in/shahzamandev

SUMMARY

Full Stack Software Engineer with 5+ years building production web applications across healthcare SaaS, AI platforms, e-commerce, and point-of-sale systems, including high-traffic products serving 1M+ monthly users. Backend specialist in Laravel, microservices, Kafka, multi-tenant architecture, and AI integration, paired with hands-on frontend experience building responsive interfaces from scratch from Figma designs using Tailwind, JavaScript, Vue.js, and jQuery, with working knowledge of React. Comfortable owning features end to end and leading teams through code review and architecture decisions.

EDUCATION

Virtual University of Pakistan | Bachelor of Science in Computer Science | Faisalabad, Pakistan | 2023 - 2025

CERTIFICATIONS

Professional Certification in PHP Development — Corvit Systems | 2020

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Rust, SQL, HTML, CSS

Frameworks: Laravel, Vue.js, React, Inertia.js, NestJS, Tailwind CSS, jQuery, Laravel Passport

Architecture: Microservices, Event-Driven Architecture, Backend for Frontend, Multi-Tenant Systems, REST APIs, OAuth 2.1, OpenID Connect, Domain-Driven Design

Databases and Infrastructure: PostgreSQL, MySQL, Redis, Docker, Kafka, CI/CD, Nginx, Apache

AI and Automation: LLM Integration, OpenAI API, Whisper, Text-to-Speech, Model Context Protocol, Function Calling, Tool Use, Multi-Agent Systems, Prompt Engineering, Streaming Responses, Embeddings, Semantic Search, Fine-tuning, AI Code Review, Workflow Automation

Testing: PHPUnit, Playwright, Automated Testing Pipelines

EXPERIENCE

JSYS Technologies | **Software Engineer, RehabSuite (multi-tenant healthcare SaaS)** | Remote | Aug 2025 - Present

- Designed and shipped an internal AI engineering platform powered by LLM-driven multi-agent workflows for automated code review, test generation, and merge request audits across the engineering organization
- Delivered 10+ Rust microservices integrated with a Laravel monolith through a Backend for Frontend layer and Kafka event streaming across patient management, appointments, and facility operations
- Built identity platform with OTP, OAuth 2.1, passkey authentication, and multi-identifier login for email and phone supporting strict multi-tenant isolation
- Integrated an AI-powered receptionist using Whisper for speech-to-text, LLM for intent understanding, and TTS for natural voice responses, with automatic escalation that transfers calls to human staff in real time, paired with a Vue.js Progressive Web App client

Enzipt | **Senior Full Stack Developer, AI-powered text tools platform (1M+ users)** | Oct 2023 - Aug 2025

- Built and maintained 30+ AI-powered text processing tools on Summarizer.org with Vue.js frontends and Laravel backends, scaling the platform to over 1M monthly active users with sub-second response times under peak load
- Designed and built multiple product frontends from scratch from Figma designs using Tailwind, JavaScript, and jQuery, translating wireframes into responsive production interfaces
- Built Minifier.org as a web asset optimization tool that ranked on page 1 of Google by rewriting the optimization pipeline and frontend delivery layer
- Delivered a complete Point of Sale system with inventory management, subscription billing, and Stripe and PayPal integration, optimized through Redis caching and background job queues

TechTrack | **Senior Backend Developer, SaaS platforms and AI-integrated applications** | Jan 2023 - Oct 2023

- Architected Matgarli, a multi-tenant SaaS for order and product management, from zero to production with role-based access control, Stripe integration, and strict tenant isolation
- Led backend for Taam AI combining LLM text generation, image analysis, and real-time multilingual WebSocket chat, and mentored junior developers through structured code reviews

Sunztech | Backend Developer, Booking platforms and service marketplaces | Faisalabad, Pakistan | Sep 2021 - Jan 2023

- Shipped RsTaxi end-to-end booking platform with real-time driver tracking via Google Maps API, automated invoice generation, and separate dashboards for admin, driver, and rider roles
- Built a dispatch algorithm matching riders to the nearest available drivers using geospatial queries in MySQL and designed role-based access control across 3 distinct user types

PROJECTS

- **RehabSuite** | Multi-tenant healthcare SaaS for Japanese rehabilitation clinics with Laravel, 10+ Rust microservices, Kafka, and BFF layer. Modules: facility.rehasaku.net, patient.rehasaku.net, ops.rehasaku.net, id.rehasaku.net
- **Summarizer.org** | AI-powered content platform with 30+ text processing tools serving 1M+ monthly active users with sub-second response times — summarizer.org
- **Paraphrasing.io** | AI-powered paraphrasing and rewriting tool with multiple modes and a fast, responsive frontend — paraphrasing.io
- **ImageToText.io** | AI-powered image-to-text extraction tool with high-accuracy OCR and a responsive frontend — imagetotext.io
- **Taam AI** | AI platform combining LLM text generation, image analysis, and real-time multilingual chatbot with WebSocket streaming — taam.ai
- **RsTaxi** | End-to-end taxi booking platform with real-time driver tracking, automated invoicing, and role-based dashboards — rstaxi.de
- **Islamabad Bullion Exchange** | Gold and silver trading platform with live pricing and catalog built on Laravel — islamabadbullionexchange.com
- **Codexory** | Software agency website with custom design and performance-optimized frontend — codexory.com
- **Additional work** | Multi-tenant SaaS, e-commerce stores, and AI and content tools including Matgarli, Humanizar Texto, and Wordle Unlimited. Further samples available on request

LEADERSHIP AND ACHIEVEMENTS

- Mentored junior developers across multiple teams through structured code reviews, pair programming, and architecture walkthroughs
- Published technical content on Laravel, PHP, and backend engineering across Dev.to, LinkedIn, and personal blog at shahzaman.dev
